Additional Laser Caution

- Laser Interlock Mechanism**
The position of the switch (S651 and S652 on the SW BOARD ASSY) for detecting loading state is detected by the system microprocessor, and the design prevents laser diode oscillation when the switch is not on CLMP terminal side (CLMP signal is OFF or high level). Thus, the interlock will no longer function if the switch is deliberately set to CLMP terminal side. (low level)
The interlock also does not function in the test mode *. Laser diode oscillation will continue, if pin 1 of M51593FP (IC101) on the PRE-AMP BOARD ASSY mounted on the PICKUP ASSY is connected to GND, or pin 19 is connected to low level (ON), or else the terminals of Q101 are shorted to each other (fault condition).
- When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 1 laser beam.

* : Refer to page 22.

2. EXPLODED VIEWS, PACKING AND PARTS LIST

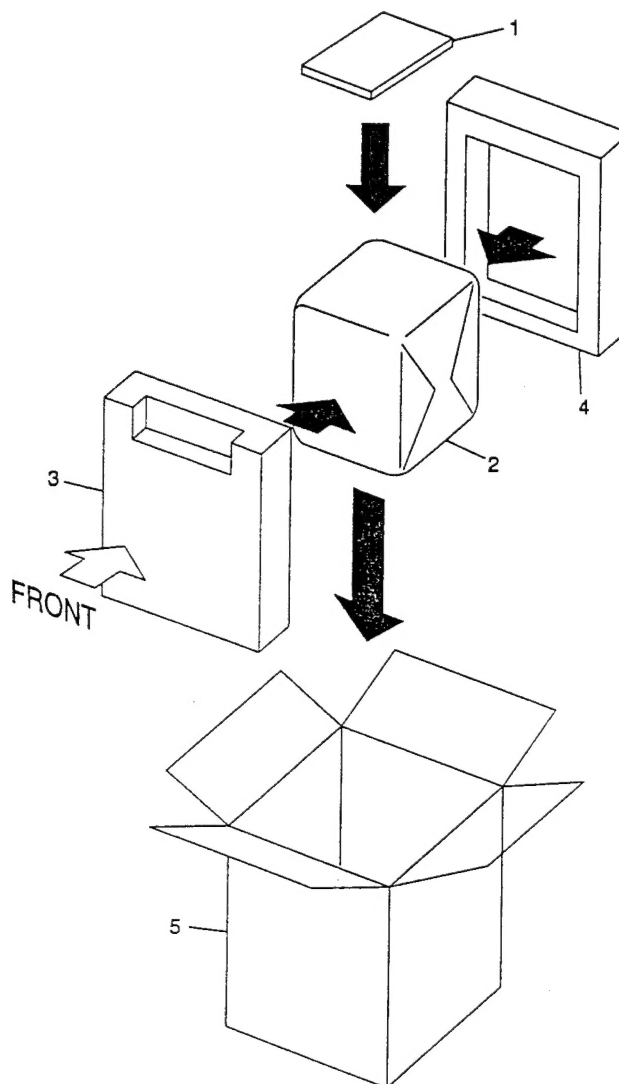

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.

4. PCB PARTS LIST

- NOTES:
- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 - The Δ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 - Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
 - When ordering resistors, first convert resistance values into code form as shown in the following examples.
- Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560Ω → 56 × 10¹ → 561 RD1/8PM561J
47kΩ → 47 × 10³ → 473 RD1/4PS473J
0.5Ω → 0R5 RN2H0R5K
1Ω → 010 RS1P010K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).
5.62kΩ → 562 × 10¹ → 5621 RN1/4PC5621F

9. OPERATIONAL DESCRIPTION

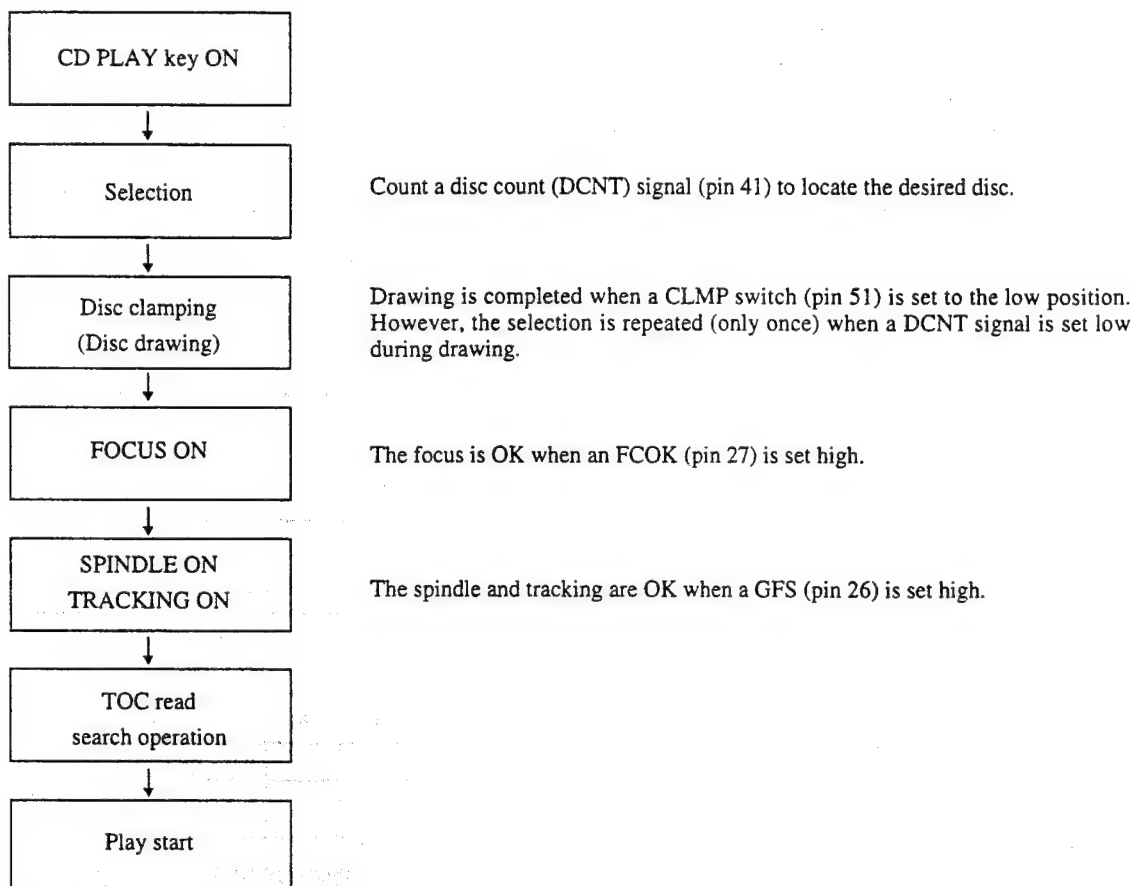

9.1 SETUP OPERATION FROM WHEN POWER IS TURNED ON

- If the unit is NG during each operation, the operation is performed again. If the operation is not completed at that time, the unit stops as NG. When the door is opened, the standby state is entered until the door is closed.

9.2 OPERATION IN PLAY MODE

- The operation from when the function switch is set to the CD position and when the mechanism is put in the home position (standby state) is described below.

10. NEW FUNCTIONS

10.1 BEST COLLECTION MEMORY

<Operation>

The tunes (a maximum of 25 tunes) during play are memorized when the **BEST** button is pressed in the PLAY mode.

The memorized tunes are played back in the order of memory when the **BEST** button is pressed in the stop mode.

<The contents of memory are maintained even if the standby mode is entered.>

10.2 PREVIOUS DISC SCAN

<Operation>

The number of a disc (a maximum of 25 tunes) that is usually played back is automatically memorized in time sequence. (The contents of old memory are sequentially cleared when 25 tunes are exceeded.)

(Example: Memory method)

Memory order (= Scan playback order)	1	2	3	4	24	25
disc No.	22	8	9	15	4	1

When the above state is memorized and disc 5 is played back.

Memory order (= Scan playback order)	1	2	3	4	25
disc No.	5	22	8	9	4

"1" is cleared.

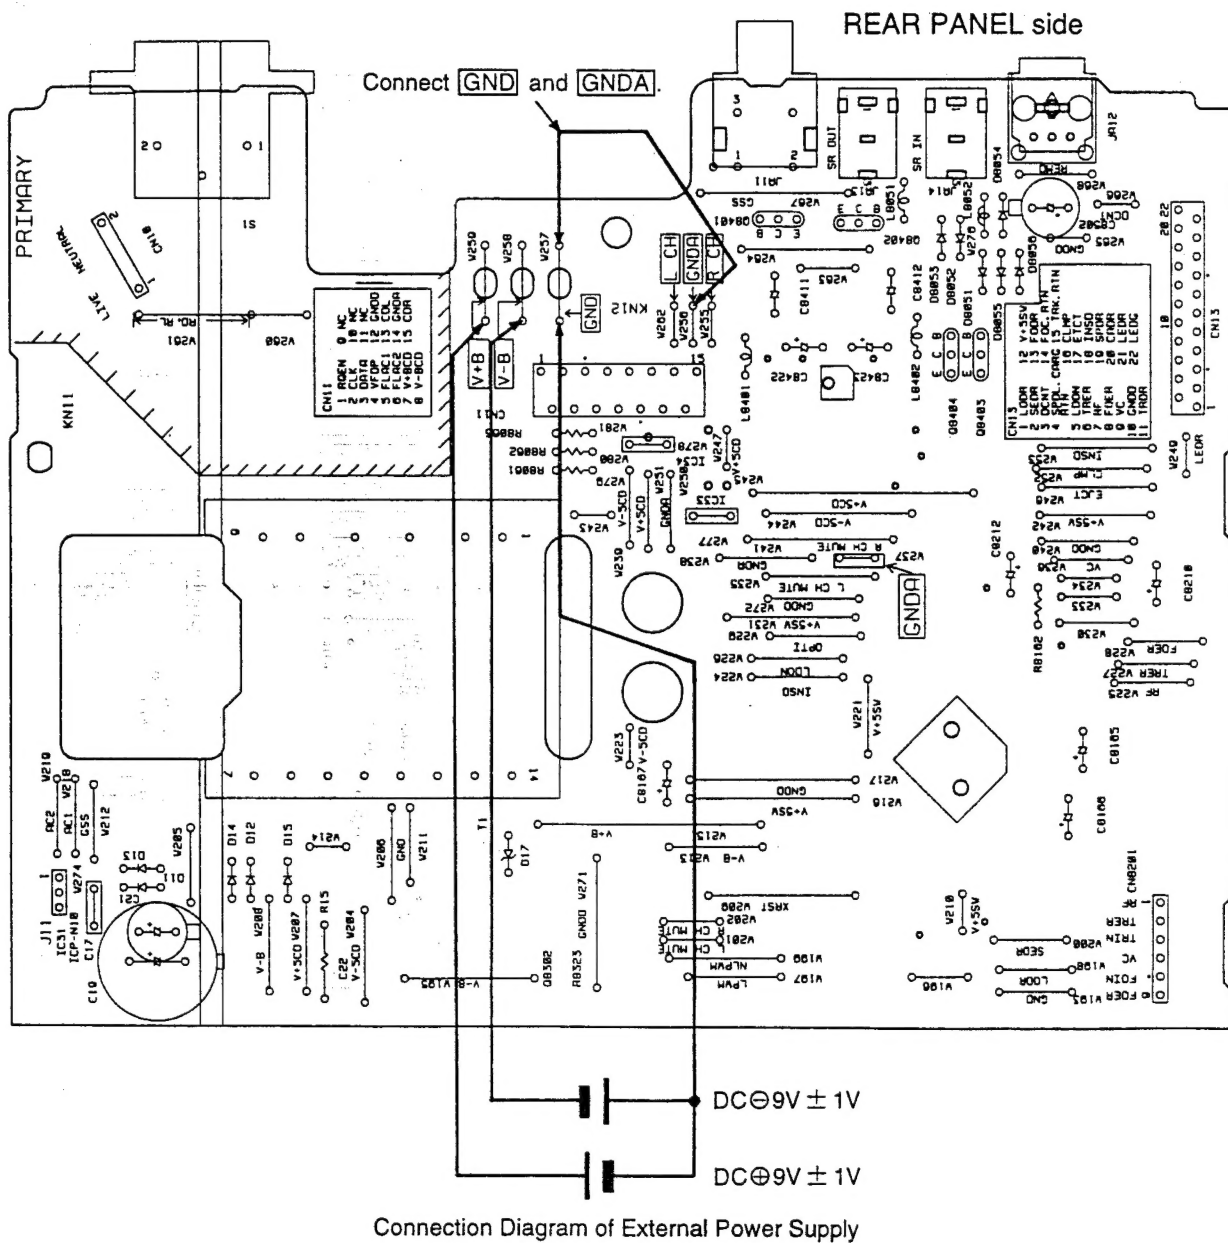

The contents of memory are shifted, and the contents of old memory are sequentially cleared when 25 tunes are exceeded.

Highlight scan operation is performed in the order of newly memorized tune when the **HI-LITE** button is pressed in the stop mode. When the PLAY button is pressed in the scan state, the scan operation stops and the disc is played back.

<The contents of memory are maintained even if the standby mode is entered.>

11. OPERATION OF SINGLE CD PLAYER

The CD player can independently operate by supplying a DC power to the power circuit in the CD assy from the outside.

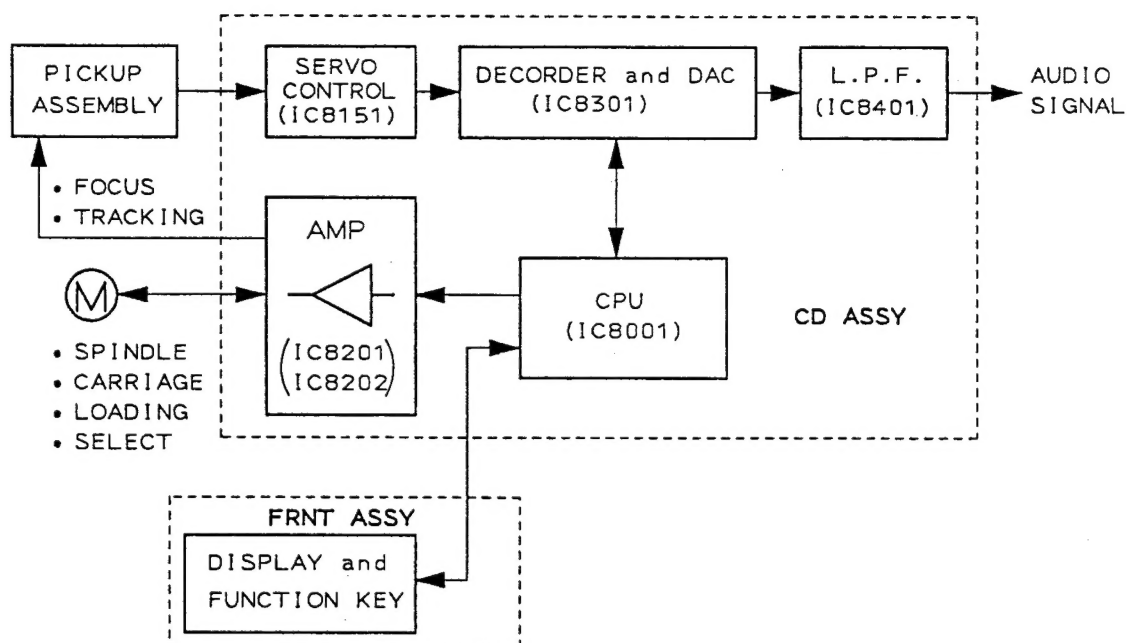

CAUTION

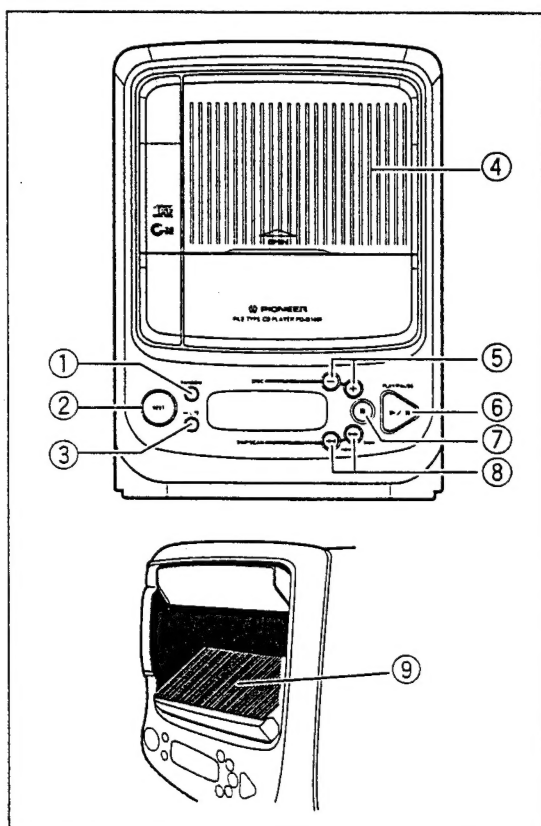

A fluorescent lamp does not light because no power is supplied to the fluorescent lamp.

Use a **REGULATED DC POWER SUPPLY** with a current capacity of more than 1A as the external power to be connected.

● CONTRAST OF MISCELLANEOUS PARTS

NOTES:

- Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
- The \triangle mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
- Parts marked by "●" are not always kept in stock. Their delivery time may be longer than usual or they may be unavailable.
- When ordering resistors, first convert resistance values into code form as shown in the following examples.

Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J = 5%, and K = 10%).

560 Ω	\rightarrow	56 \times 10 ¹	\rightarrow	561	RD1/4PU	561J
47k Ω	\rightarrow	47 \times 10 ³	\rightarrow	473	RD1/4PU	473J
0.5 Ω	\rightarrow	0R5			RN2H	0R5K
1 Ω	\rightarrow	1R0			RS1P	1R0K

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

5.62k Ω	\rightarrow	562 \times 10 ¹	\rightarrow	5621	RN1/4PC	5621F
